# Fix Your HP Envy 6000 Wi-Fi Issues Now!

Here we have outlined some simple and complex solutions that help you fix the Wi-Fi connectivity issue with your printer. To quickly resolve the problem, try the following solutions in the order listed below.

#1 Verify The Network Connection

- Let's start troubleshooting the printer's wireless connection problem by ensuring your Wi-Fi network is functioning properly.
- Here's how: Connect your smartphone or tablet to your Wi-Fi network and try accessing a web page or an application that requires a stable internet connection.
- If the page or app loads without any problems, you know your network connection is active and stable.
- If not, you'll need to fix the network issue before connecting your printer to Wi-Fi.
- Don't worry—it's easy and fast. Need more help? Contact us!
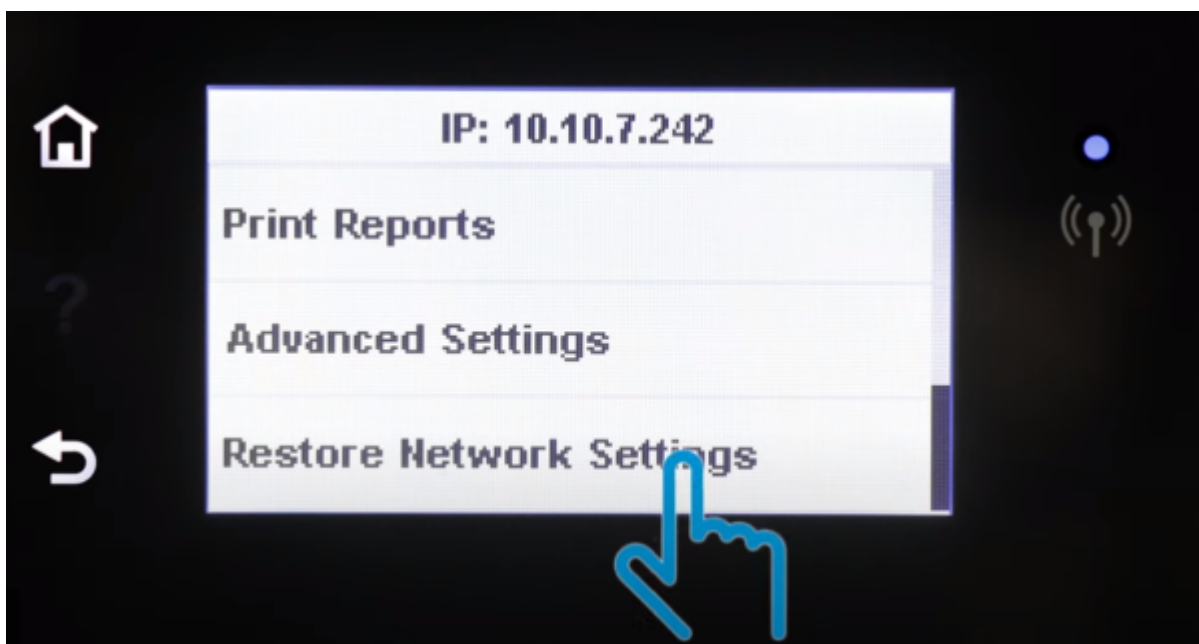

#2 Check The Wireless Settings

- Check the wireless settings if the network connection is working, but your printer is not connecting to Wi-Fi.
- Open the Network and Sharing Center window on your Windows computer, then click "Change adapter settings."
- Right-click on the wireless connection and select "Properties."
- Make sure the "Enable" option for the wireless LAN is checked.
- Now, try to connect your printer to Wi-Fi again.

- If it is still not connecting, don't worry; try the next solution!

### #3 Restore The Printer's Wi-Fi Setup Mode

- Restore your HP Envy 6000 printer's wireless setup mode and try to connect it to Wi-Fi.
- Restoring the Wi-Fi setup mode is a piece of cake.
- Ensure that you have turned on your printer.
- Now, press and hold the printer's Wi-Fi button for five seconds, then release it.
- You'll know you're in the right spot when your printer's status light turns purple, indicating that the setup mode is activated.
- Now you're ready to connect your printer to Wi-Fi. It's that easy!

#4 Update The Printer's Firmware

- If the printer is still not connecting to Wi-Fi, try updating the printer's firmware!

- Head over to the "Support" section in the printer's settings and select "Firmware Update."
- Follow the instructions, and you'll be up and running in no time!

#5 Reset The Printer
- If all else fails, then you can try resetting the printer.
- Here's how:
- Unplug the printer from the power source.
- Wait a few minutes.
- Plug the printer back in.
- Turn the printer on. This will help you get your printer back up and running!
